Fresh Fragrance

Low Foam

# EXTRACTION CARPET CLEANER

**Dual Action Adds "Stain Resistance" to Nylon Carpet**

Safeguard Extraction Carpet Cleaner attacks all soils commonly found in carpeting. Its unique formula emulsifies them, and then using the latest technology, encapsulates the soil for easy removal. Because the soil is encapsulated, whatever does not come out during extraction will be removed in subsequent dry vacuuming. It can even eliminate the need for re-shampooing when wicking (capillary action) occurs in heavily soiled carpets.

Safeguard Extraction Carpet Cleaner will not remove the stain resistant properties manufactured in to the carpet and will actually replenish them. As a bonus, this product eliminates the need for a defoamer, even on carpeting with residue from previous shampoos.

*Complies with carpet manufacturer's guidelines for "Wet Side" cleaning.*

**DIRECTIONS:**

- 1) Vacuum carpet thoroughly to remove as much loose soil as possible.
- 2) Apply SafeGuard Traffic Lane Cleaner to all high traffic areas and soiled spots with a pump up sprayer or other application device. For best results, allow SafeGuard traffic Lane Cleaner to remain on carpet between 5-10 minutes before extracting.
- 3) Dilute Extraction Carpet Cleaner at the rate of 1-2 ounces per gallon of hot water, depending on soil condi-

tions. Add to solution tank of carpet extraction machine.

- 4) Use carpet extraction machine making sure you overlap each pass and vacuum up as much liquid as possible.
- 5) After carpet is completely dry, vacuum thoroughly and replace furniture. If furniture must be replaced before carpet is dry, place coasters or foil squares under any part of furniture that will touch wet carpet.

*\*As with all cleaning products, always check for colorfastness on carpeting and upholstery in an inconspicuous area before using these products.*
